

# TruStack – WFaaS

Simple, complete and trusted protection for your endpoints on a **flexible** basis

TruStack WFaaS (Worry-Free as a service) powered by Trend Micro is the broadest range of threat detection available powered by Xgen security and managed by TruStack.

TruStack WFaaS provides a blend of threat defence techniques and connected threat defences that constantly learns, adapts and automatically shares intelligence across your environment, giving you detection and response that is:

## Flexible

- Flex up or down on a monthly basis depending on how many users you would like to protect.
- No long-term agreements, 1-month subscriptions.

## Simple

- Simple to use and won't slow you down.
- A single, intuitive web console for in-depth visibility and control across your entire organisation.
- Manages multiple devices within a single agent.

## Complete

- High-fidelity machine learning combined with other state-of-the-art detection techniques gives you the broadest protection against ransomware and advanced attacks.
- Uses a blend of advanced threat protection techniques to eliminate security gaps across any user activity, any endpoint and any mailbox.
- Part of TruStack's approach to cybersecurity.

For many businesses updating and upgrading your security solutions are often pushed aside or overlooked, leading to gaps in security and putting your entire business at risk.

“

We chose to use TruStack WFaaS for our endpoint security requirements due to it allowing us to have the option of flexing licences up or down on a monthly basis. With traditional endpoint solutions we have been tied into contracts for a number of years, however with this service it has allowed the business to become more agile and embrace a fully managed security service on a subscription basis.

David Mather, IT Manager at Sintons LLP

”

Moving to a cloud-based managed services solution will provide your organisation with:

- **Always up-to-date protection**, automatically giving you the latest versions of the product across all devices and platforms.
- **More features and functionality**, including Application Control, Data Loss Prevention, Cloud-app security, Bitlocker Encryption Management, Email security and much more.

TruStack will provide you with;

- **A fully managed service**. When alerts are raised on the platform, the TruStack team will raise a ticket to ensure that the issue is monitored.
- **Monthly reporting** of the environment being protected by WFaaS.
- **The ability to flex your subscription**, up or down on a monthly basis.

## Worry-Free services solutions

FEATURES	TruStack WFaaS*
<b>Endpoint Security</b>
